A web search engine is a software system that is designed to search for information on the internet.

E-Mail

- ❖ It is known as electronic mail
- ❖ It is used to exchange of computer-stored messages by telecommunication.
- ❖ E-mail messages are usually encoded in ASCII text.

E-Mail (Contd...)

name@company.com

User Name-

This part of the e-mail address states who specifically owns that particular e-mail. Works like a specific post office mail address – i.e. It is like the 500 in the address:
500 Oak Road,
New York, New York 10001

@ a.k.a. "At Sign"-

Separates the name and its general server name or where the e-mail goes.

Domain Name-

Comes after the "@" sign. This refers to the mail server, the computer that stores your electronic mailbox. It's usually the name of a company or organization.

. (dot)-

Separates parts of the address so it does not all run together and the computer can distinguish the different parts of the address.

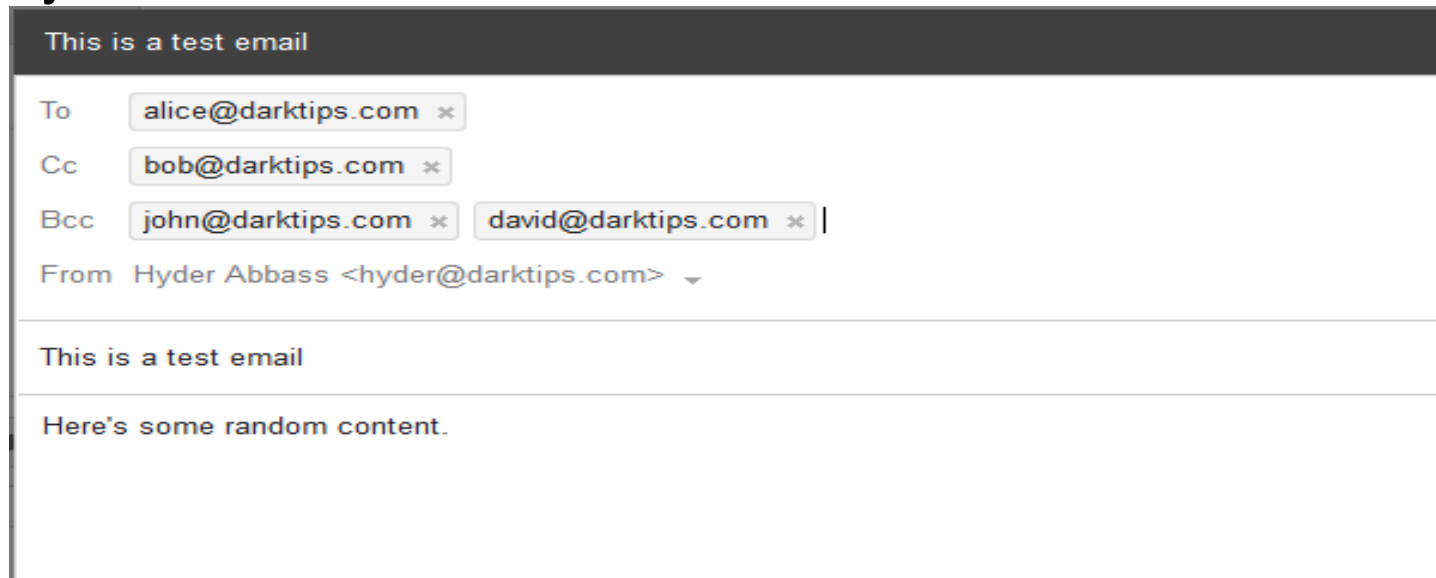

The Domain-

At the end of a web address. Tells what type of web page you are viewing.
.com – Commercial
.org – Non-For-Profit Organization
.edu – Education (Collages/Universities)
.net – Internet Related
.mil – US Military
.gov – US Government
.us – United States
.uk – United Kingdom

provider/organization
